MICROPROCESSORS AND MICROSYSTEMS

Volume Indices 24 (2000–2001)

No 1 pp 1–42
No 2 pp 49–119
No 3 pp 121–167
No 4 pp 175–222
No 5 pp 225–275
No 6 pp 283–327
No 7 pp 333–381
No 8 pp 387–436
No 9 pp 441–478
No 10 pp 481–530

Article index

Number 1

Simulative performance analysis of distributed switching fabrics for SCI-based systems
M. A. Sarwar, A. D. George 1

Hardware-in-the-loop environment for servo system controller design, tuning and testing
M. Linjama, T. Virvalo, J. Gustafsson, J. Lintula, V. Aaltonen, M. Kivikoski 13

PARNEU: general-purpose partial tree computer
P. Kolinummi, P. Hämäläinen, T. Hämäläinen, J. Saarinen 23

Number 2

Special Issue based on Mechatronics '98—the Sixth UK Mechatronics FORUM International Conference 49

A conceptual study for a computer-based tool to support electronics design in a mechatronic environment
R. M. Walters, D. A. Bradley, A. P. Dorey 51

Mechatronics in medical engineering: advanced control of a ventilation device
F. Simon, I. Jenayeh, H. Rake 63

An experimental workbench for innovative pneumatic units co-operating under distributed control
E. Ravina, R. Fattori 71

A modelling framework to support the design and analysis of distributed real-time control systems
M. Törngren, O. Redell 81

Design methodology of application specific integrated circuits for mechatronic systems
F.-M. Renner, K.-J. Hoffmann, R. Markert, M. Glesner 95

Application of Fuzzy PI control to improve the positioning accuracy of a rotary-linear motor driven by two-dimensional ultrasonic actuators
M. Kinouchi, I. Hayashi, N. Iwatsuki, K. Morikawa, J. Shibata, K. Suzuki 105

Smart components-based servo pneumatic actuation systems
J. Pu, P. R. Moore, C. B. Wong 113

Numbers 3

Microprocessor controlled exhaust gas lambda sensor
P. N. Botsaris, A. Polyhroniadis 121

A hardware/software codesign for improved data acquisition in a processor based embedded system
F. Thomas, M. M. Nayak, S. Udupa, J. K. Kishore, V. K. Agrawal 129

A parallel algorithm for Lagrange interpolation on the cube-connected cycles
H. Sarbazi-Azad, M. Ould-Khaoua, L. M. Mackenzie 135

An integrated state assignment and flip-flop selection technique for FSM synthesis
I. Ahmad, F. M. Ali, R. Ul-Mustafa 141

Real-time implementation of a Doppler signal spectral estimator using sequential and parallel processing techniques
M. M. Madeira, M. O. Tokhi, M. Graça Ruano 153

Number 4

A survey of new research directions in microprocessors
J. Šilc, T. Ungerer, B. Robic 175

Sequential diagnosis tool
A. Žužek, A Biasizzo, F. Novak 191

A review of high-level synthesis for dynamically reconfigurable FPGAs
Xuejie Zhang, Kam W. Ng 199

MARBLE: an asynchronous on-chip macrocell bus
W.J. Bainbridge, S.B. Furber 213

Number 5

A quantitative study for Java microprocessor architectural requirements. Part I: Instruction set design
M. W. El-Kharashi, F. ElGuibaly, K. F. Li 225

A quantitative study for Java microprocessor architectural requirements. Part II: high-level language support
M. W. El-Kharashi, F. ElGuibaly, K. F. Li 237

An evolving neural network approach in unit commitment solution
M. H. Wong, T. S. Chung, Y. K. Wong 251

VME crate interconnection through the SCI network in large data acquisition systems
F. J. Mora, Á. Sebastiá, H. Müller 263

Accurate velocity evaluation using adaptive sampling interval
J. N. Lygouras 269

Number 6

FID: feature interaction detection tool
A. Sefidcon, F. Khendek 283

On using nomadic services for distributed intelligence
P. L. Simeonov 291

Design and implementation of a low-cost/high-performance Video on Demand server
A. Calvagna, A. Puliafito, L. Vita 299

Replicated servers allocation for multiple information sources in a distributed environment
F. Chen, B. Li 307

PII: S0141-9331(01)00093-X

MPATH: a loop-free multipath routing algorithm
S. Vutukury, J. J. Garcia-Luna-Aceves 319

Number 7

Tracing Windows95
M. Zhou, A. J. Smith 333
An integrated environment for rapid prototyping of DSP Algorithms using matlab and Texas instruments' TMS320C30
K. H. Hong, W. S. Gan, Y. K. Chong, K. K. Chew, C. M. Lee, T. Y. Koh 349
The design and evaluation of a multiprocessor system for computer vision
M. F. Ercan, Y.-F. Fung 365
Providing an accurate global time reference to indoor computer based equipment
D. J. Parish, I. W. Phillips, C. Rodgers, P. Aliakai 379

Number 8

Design of ATM circuit emulation service terminal adapter
T.-L. Kao, Y.-C. Lee, K.-T. Wu 387
User selectable reduced instruction set forth
J. Doorn, M. Ridao 399
Exception handling for PLC-based process control software
G. Godena, M. Colnarič 407
The GENESIS parallelism management system employing concurrent process-creation services
M. Hobbs, A. Goscinski 415
Utilization of cache area in on-chip multiprocessor
H. Oi, N. Ranganathan 429

Number 9

Testing and testing techniques for real-time embedded software systems 441
Checking states and transitions of a set of communicating finite state machines
R. M. Hierons, 443
Information system architecture for developing reusable testplans for embedded software
G. B. Singh, S. Gobrogge 453
Testing distributed real-time systems
H. Thane, H. Hansson 463

Number 10

A comparison of software-based techniques intended to increase the reliability of embedded applications in the presence of EMI
R. H. L. Ong, M. J. Pont, W. Peasgood 481
A CASE-tool oriented approach for embedded systems design
T. M. McGinnity, L. P. Maguire 493
Efficient march test for 3-coupling faults in random access memories
P. Casscaval, S. Bennett 501
A design methodology for PC-expansion card development
N. Sriskanthan, W. Y. Hooi 511
A unified messaging system on the Internet
C. K. Yeo, S. C. Hui, I. Y. Soon, C. T. Lau 523

Keyword Index

AAL1
Design of ATM circuit emulation service terminal adapter 387
Adapter Development Model
A design methodology for PC-expansion card development 511
Advanced superscaler processor
A survey of new research directions in microprocessors 175
Allocation
A modelling framework to support the design and analysis of distributed real-time control systems 81
API
A design methodology for PC-expansion card development 511
Application specific integrated circuits
Design methodology of application specific integrated circuits for mechatronic systems 95
Artificial neural networks
PARNEU: general-purpose partial tree computer 23
Asynchronous
MARBLE: an asynchronous on-chip macrocell bus 213
ATM
Design of ATM circuit emulation service terminal adapter 387

BONeS
Simulative performance analysis of distributed switching fabrics for SCI-based systems 1

Cache area
Utilization of cache area in on-chip multiprocessor 429
Cascaded controller structure
Mechatronics in medical engineering: advanced control of a ventilation device 63
CASE-tools
A CASE-tool oriented approach for embedded systems design 493
Catalytic converter efficiency monitoring
Microprocessor controlled exhaust gas lambda sensor 121
Chip-level
MARBLE: an asynchronous on-chip macrocell bus 213
Circuit emulation
Design of ATM circuit emulation service terminal adapter 387
Communicating finite state machines
Checking states and transitions of a set of communicating finite state machines 443
Compiler
User selectable reduced instruction set forth 399
Components-based
Smart components-based servo pneumatic actuation systems 113
Computer aided design
Design methodology of application specific integrated circuits for mechatronic systems 95
Computer vision
The design and evaluation of a multiprocessor system for computer vision 365
Concurrent process creation
The GENESIS parallelism management system employing concurrent process-creation services 415
Constrained identification sequences
Checking states and transitions of a set of communicating finite state machines 443
Control systems
A modelling framework to support the design and analysis of distributed real-time control systems 81
Control
Smart components-based servo pneumatic actuation systems 113
Count-to-infinity problem
MPATH: a loop-free multipath routing algorithm 319
Coupling faults
Efficient march test for 3-coupling faults in random access memories 501
Crate interconnection
VME crate interconnection through the SCI network in large data acquisition systems 263
Cube-connected cycles
A parallel algorithm for Lagrange interpolation on the cube-connected cycles 135

Data acquisition systems
VME crate interconnection through the SCI network in large data acquisition systems 263
Data acquisition
A hardware/software codesign for improved data acquisition in a processor based embedded system 129
Datascalar processor
A survey of new research directions in microprocessors 175
Decision trees
Sequential diagnosis tool 191
Design of embedded systems
A modelling framework to support the design and analysis of distributed real-time control systems 81
Detection
FID: feature interaction detection tool 283
Determinism
Testing distributed real-time systems 463
Diagnosis tool
Sequential diagnosis tool 191
Diagnostics
An experimental workbench for innovative pneumatic units co-operating under distributed control 71
Digital signal processing
An integrated environment for rapid prototyping of DSP Algorithms using matlab and Texas instruments' TMS320C30 349
Real-time implementation of a Doppler signal spectral estimator using sequential and parallel processing techniques 153
Digital signal processors
Accurate velocity evaluation using adaptive sampling interval 269
Discrete-event simulation
Simulative performance analysis of distributed switching fabrics for SCI-based systems 1
Disk array
Design and implementation of a low-cost/high-performance Video on Demand server 299
Distributed control
An experimental workbench for innovative pneumatic units co-operating under distributed control 71
Distributed environment
Replicated servers allocation for multiple information sources in a distributed environment 307
Distributed real-time systems
Testing distributed real-time systems 463
Distributed routing algorithm
MPATH: a loop-free multipath routing algorithm 319
Distributed systems
A modelling framework to support the design and analysis of distributed real-time control systems 81
Doppler signal spectral estimator
Real-time implementation of a Doppler signal spectral estimator using sequential and parallel processing techniques 153
Dynamically reconfigurable systems
A review of high-level synthesis for dynamically reconfigurable FPGAs 199

Elastic rotor
Design methodology of application specific integrated circuits for mechatronic systems 95
Electromagnetic Interference
A comparison of software-based techniques intended to increase the reliability of embedded applications in the presence of EMI 481
Electronics
A conceptual study for a computer-based tool to support electronics design in a mechatronic environment 51
Email
A unified messaging system on the Internet 523
Embedded systems design
A CASE-tool oriented approach for embedded systems design 493
Embedded systems
A hardware/software codesign for improved data acquisition in a processor based embedded system 129
Information system architecture for developing reusable testplans for embedded software 453
Emissions
Microprocessor controlled exhaust gas lambda sensor 121

PII: S0141-9331(01)00095-3

Engineering design
A conceptual study for a computer-based tool to support electronics design in a mechatronic environment 51
Exception handling
Exception handling for PLC-based process control software 407
Expert systems
Sequential diagnosis tool 191

Fault injection
Efficient march test for 3-coupling faults in random access memories 501
Fax communication
A unified messaging system on the Internet 523
Feature interactions
FID: feature interaction detection tool 283
Field programmable gate arrays
A review of high-level synthesis for dynamically reconfigurable FPGAs 199
Finite state machine
An integrated state assignment and flip-flop selection technique for FSM synthesis 141
Flip-flops
An integrated state assignment and flip-flop selection technique for FSM synthesis 141
Forth
User selectable reduced instruction set forth 399
Function Token
A comparison of software-based techniques intended to increase the reliability of embedded applications in the presence of EMI 481
Functional faults
Efficient march test for 3-coupling faults in random access memories 501
Fuzzy control
Application of Fuzzy PI control to improve the positioning accuracy of a rotary-linear motor driven by two-dimensional ultrasonic actuators 105

Genetic algorithm
An evolving neural network approach in unit commitment solution 251
Global positioning system
Providing an accurate global time reference to indoor computer based equipment 379
Guided evolutionary simulated annealing
An integrated state assignment and flip-flop selection technique for FSM synthesis 141

Hardware-in-the-loop simulation
Hardware-in-the-loop environment for servo system controller design, tuning and testing 13
Hardware-software co-design
A CASE-tool oriented approach for embedded systems design 493
Heterogeneous architectures
Real-time implementation of a Doppler signal spectral estimator using sequential and parallel processing techniques 153
High-level synthesis
A review of high-level synthesis for dynamically reconfigurable FPGAs 199
High performance computing
Real-time implementation of a Doppler signal spectral estimator using sequential and parallel processing techniques 153
High-performance networks
Simulative performance analysis of distributed switching fabrics for SCI-based systems 1
Homogeneous architectures
Real-time implementation of a Doppler signal spectral estimator using sequential and parallel processing techniques 153
Hydraulics
Hardware-in-the-loop environment for servo system controller design, tuning and testing 13

Instruction Pointer corruption
A comparison of software-based techniques intended to increase the reliability of embedded applications in the presence of EMI 481
Integrated magnetic bearings
Design methodology of application specific integrated circuits for mechatronic systems 95
Intelligent network
FID: feature interaction detection tool 283
Intelligent networks
On using nomadic services for distributed intelligence 291
Interconnection networks
A parallel algorithm for Lagrange interpolation on the cube-connected cycles 135
Internet telephony
A unified messaging system on the Internet 523
Internet
A unified messaging system on the Internet 523
Design and implementation of a low-cost/high-performance Video on Demand server 299
Interpreter
User selectable reduced instruction set forth 399

Java instruction set architecture
A quantitative study for Java microprocessor architectural requirements. Part I: Instruction set design 225
A quantitative study for Java microprocessor architectural requirements. Part II: high-level language support 237
Java processors
A quantitative study for Java microprocessor architectural requirements. Part I: Instruction set design 225
A quantitative study for Java microprocessor architectural requirements. Part II: high-level language support 237
Java virtual machine
A quantitative study for Java microprocessor architectural requirements. Part I: Instruction set design 225
A quantitative study for Java microprocessor architectural requirements. Part II: high-level language support 237
Java
A quantitative study for Java microprocessor architectural requirements. Part I: Instruction set design 225
A quantitative study for Java microprocessor architectural requirements. Part II: high-level language support 237

Lagrange interpolation
A parallel algorithm for Lagrange interpolation on the cube-connected cycles 135

Macrocell-bus
MARBLE: an asynchronous on-chip macrocell bus 213
March test
Efficient march test for 3-coupling faults in random access memories 501
matlab
An integrated environment for rapid prototyping of DSP Algorithms using matlab and Texas instruments' TMS320C30 349
Mechatronic systems
Design methodology of application specific integrated circuits for mechatronic systems 95
Mechatronics
A conceptual study for a computer-based tool to support electronics design in a mechatronic environment 51
Memory latency
Utilization of cache area in on-chip multiprocessor 429
Memory testing
Efficient march test for 3-coupling faults in random access memories 501
Microcontroller-based digital control
Mechatronics in medical engineering: advanced control of a ventilation device 63
Microcontrollers
User selectable reduced instruction set forth 399
Modelling framework
A modelling framework to support the design and analysis of distributed real-time control systems 81
Multiple information sources
Replicated servers allocation for multiple information sources in a distributed environment 307
Multiple paths
MPATH: a loop-free multipath routing algorithm 319
Multiscalar processor
A survey of new research directions in microprocessors 175

Network convergence
On using nomadic services for distributed intelligence 291
Neural network
An evolving neural network approach in unit commitment solution 251

Neurocomputer
PARNEU: general-purpose partial tree computer 23
Nomadic service Logic
On using nomadic services for distributed intelligence 291
Non-linear control
Design methodology of application specific integrated circuits for mechatronic systems 95
NOP Fill
A comparison of software-based techniques intended to increase the reliability of embedded applications in the presence of EMI 481

On board diagnosis
Microprocessor controlled exhaust gas lambda sensor 121
On-chip multiprocessor
Utilization of cache area in on-chip multiprocessor 429
Operating systems
The GENESIS parallelism management system employing concurrent process-creation services 415
Optimisation
User selectable reduced instruction set forth 399
Oxygen or lambda sensor
Microprocessor controlled exhaust gas lambda sensor 121
Parallel algorithms
A parallel algorithm for Lagrange interpolation on the cube-connected cycles 135
Parallel architectures
The design and evaluation of a multiprocessor system for computer vision 365
Parallel processing on clusters
The GENESIS parallelism management system employing concurrent process-creation services 415
Parallel processing
Real-time implementation of a Doppler signal spectral estimator using sequential and parallel processing techniques 153
Parallel vision algorithms
The design and evaluation of a multiprocessor system for computer vision 365
Partial tree shape architecture
PARNEU: general-purpose partial tree computer 23
PB bus
A design methodology for PC-expansion card development 511
Performance evaluation
The GENESIS parallelism management system employing concurrent process-creation services 415
Utilization of cache area in on-chip multiprocessor 429
Piezoelectric actuator
Application of Fuzzy PI control to improve the positioning accuracy of a rotary-linear motor driven by two-dimensional ultrasonic actuators 105
Pneumatics
An experimental workbench for innovative pneumatic units co-operating under distributed control 71
Smart components-based servo pneumatic actuation systems 113
Position control systems
Accurate velocity evaluation using adaptive sampling interval 269
Pragmatic approach
FID: feature interaction detection tool 283
Process control
Exception handling for PLC-based process control software 407
Programmable logic controllers
Exception handling for PLC-based process control software 407
Programmable logic devices
Accurate velocity evaluation using adaptive sampling interval 269

Rapid prototyping
An integrated environment for rapid prototyping of DSP Algorithms using matlab and Texas instruments' TMS320C30 349
Real-time signal processing
Real-time implementation of a Doppler signal spectral estimator using sequential and parallel processing techniques 153
Real-time systems
A modelling framework to support the design and analysis of distributed real-time control systems 81
Real-time workshop
An integrated environment for rapid prototyping of DSP Algorithms using matlab and Texas instruments' TMS320C30 349
Reproducibility
Testing distributed real-time systems 463
Rotary-linear motor
Application of Fuzzy PI control to improve the positioning accuracy of a rotary-linear motor driven by two-dimensional ultrasonic actuators 105

SAR
Design of ATM circuit emulation service terminal adapter 387
Scalable coherent interface
Simulative performance analysis of distributed switching fabrics for SCI-based systems 1
Scalable parallel implementation
PARNEU: general-purpose partial tree computer 23
SCI network
VME crate interconnection through the SCI network in large data acquisition systems 263
Sequential diagnosis
Sequential diagnosis tool 191
Sequential processing
Real-time implementation of a Doppler signal spectral estimator using sequential and parallel processing techniques 153
Server allocation
Replicated servers allocation for multiple information sources in a distributed environment 307
Service architecture
On using nomadic services for distributed intelligence 291
Servo actuators
Smart components-based servo pneumatic actuation systems 113
Simulink
An integrated environment for rapid prototyping of DSP Algorithms using matlab and Texas instruments' TMS320C30 349
Single way delays
Providing an accurate global time reference to indoor computer based equipment 379
Software engineering
Exception handling for PLC-based process control software 407
Software metrics
Information system architecture for developing reusable testplans for embedded software 453
Software prevention
A comparison of software-based techniques intended to increase the reliability of embedded applications in the presence of EMI 481
Software quality
Information system architecture for developing reusable testplans for embedded software 453
Software reuse
Information system architecture for developing reusable testplans for embedded software 453
Software validation
Information system architecture for developing reusable testplans for embedded software 453
Spectral estimation
Real-time implementation of a Doppler signal spectral estimator using sequential and parallel processing techniques 153
SRTS
Design of ATM circuit emulation service terminal adapter 387
State assignment
An integrated state assignment and flip-flop selection technique for FSM synthesis 141
State checking
Checking states and transitions of a set of communicating finite state machines 443
Superspeculative processor
A survey of new research directions in microprocessors 175
Switching fabrics
Simulative performance analysis of distributed switching fabrics for SCI-based systems 1
System integration
A conceptual study for a computer-based tool to support electronics design in a mechatronic environment 51
System-on-chip
MARBLE: an asynchronous on-chip macrocell bus 213

Telecommunication services
FID: feature interaction detection tool 283
Testing
Checking states and transitions of a set of communicating finite state machines 443
Testing distributed real-time systems 463
Time-sharing systems
Tracing Windows95 333

Timing analysis
A modelling framework to support the design and analysis of distributed real-time control systems 81
Timing information
Providing an accurate global time reference to indoor computer based equipment 379
Traceability
Information system architecture for developing reusable tesiplans for embedded software 453
Trace processor
A survey of new research directions in microprocessors 175
Tracing
Tracing Windows95 333

Ultrasonic actuator
Application of Fuzzy PI control to improve the positioning accuracy of a rotary-linear motor driven by two-dimensional ultrasonic actuators 105
Unified messaging system
A unified messaging system on the Internet 523
Unit commitment problem
An evolving neural network approach in unit commitment solution 251
Velocity and acceleration estimation
Accurate velocity evaluation using adaptive sampling interval 269
Ventilation device
Mechatronics in medical engineering: advanced control of a ventilation device 63
Video on Demand
Design and implementation of a low-cost/high-performance Video on Demand server 299

Windows95
Tracing Windows95 333
